**Winter**

The last season of the year is winter. This is the coldest season, and it begins in December and lasts until March. Winter begins on the winter solstice, which is the day of the year that we get the least amount of sunshine. Weather changes during the winter. It can become quite treacherous, or dangerous, for some areas. This is because of the precipitation that occurs during the winter. Snow, freezing rain, and ice all fall during the winter. This precipitation can start to accumulate on the ground if it is cold enough. This causes danger to people driving cars or trucks. It can also be dangerous to walk on.
