Franny the Flamingo

Franny is a young Flamingo. She lives in the lagoon habitat at the zoo. She loves hanging out with her Flamingo Family and seeing visitors at the zoo. But, there is something that she does not love. Franny does not love her feathers. All her brothers and sisters have pink feathers, but Franny has gray feathers. Her mom tries to explain to her every day that she has to wait for her feathers to become pink. Franny doesn't believe her. She just thinks that her feathers will always be gray and ugly. Her sister told her that her feathers were gray when she was young.

Her sister told her that her feathers were gray when she was young. This made Franny feel a little better.

Flamingo Nonfiction Questions

Name: _____

Where can flamingos be found?

What do flamingos do in water?

What does a flamingo's diet consist of?

Write one interesting fact about flamingos.

Flamingos

A flamingo is a large, pink bird. They can be found in warm, wet areas in the world, such as around South American and African coasts. These birds usually can be found in large flocks with other flamingos. They wade in shallow water all day. In the water, they will feed on fish and drink water. Flamingos can live up to 30 years old, on average. A very common way to see flamingos is standing on one leg in a shallow body of water. A flamingo stands on one leg when it sleeps. It switches from one leg to the other when one leg gets too tired to stand. A flamingo's beak is curved, which helps them get shrimp and fish out of the water. They also feed on algae, which gives them their pink color.

Fiction: 3

Ellie the Elephant

Ellie was an African elephant who was brand new 9
at the zoo. She liked her new habitat at the zoo. 20
It was better than her last zoo. Her last zoo was 30
very small. At this zoo, she had a lot of room to 42
walk around and lots of food to eat. There was 52
only one problem. She didn't have any one to talk 62
to all day. After two weeks of being pretty 71
lonely, Ellie saw the zookeeper walk another 78
African elephant through the gate to her 84
habitat. This elephant looks just her size, which 91
meant she was probably young like her! She was 100
thrilled to have a new elephant to hang out with 110
and spend time with. Now, she really loved her 119
new zoo. It had everything Ellie could possibly 127
need. Food, space, and friends. 132

Elephants

There are two species of elephants. They are 8
the Asian elephant and the African elephant. The 16
African elephant is larger than the Asian 23
elephant, but they have very close similarities. 30
Elephants are very large in size. They are very 39
tall, standing between seven feet and twelve feet. 47
They also weigh a lot. Their weight can range 56
from three thousand to five thousand pounds. 63
These mammals can live up to seventy years. 71
An elephant's diet consists of grass, fruits, 78
and roots of trees and plants. An elephant's 86
trunk is very special. Its trunk can suck water 95
up to squirt into its mouth. Elephants can also 104
pick objects up with their trunk and use it as a 115
snorkel when they are swimming underwater. 121
